

Abstract**Integrated Circuit for a Mobile Radio Device with Call-answering Function**

^{Am}
[^] The invention is directed to an integrated circuit (IS) having a
 microcontroller (MK) and a digital signal processor (DSP) for digital voice processing
 5 in a communications terminal device, particularly in a mobile radio device for
 wireless linking to a cellular radio network, ^{wherein} whereby an interface to a digital voice
 memory (SS) is provided, ^{such that} a call-answering functionality ^{is effected} being realized therewith
 together with the microcontroller.
